Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 51976 Concern Info Neighbor to the north was burning brush that burned onto concerned party's property. The fire department was called to put out. About ten years ago this neighbor was visited by the Department for open burning violations. The caller would like for the Department to come out and talk with neighbor again. The caller would like to be called about outcome but chose not to provide their name.								
Comments Fire consisted only of vegetation originating from the same property. No violations were observed.?								
KCRO	12/27/2022	12/27/2022	ZMDR, dba Republic Foods	Lone Jack Johnson	Odor	JH		
Concern No. 52060 Concern Info My kids went outside today after being inside for the holiday and my kids came back in immediately and stated the odor was worse than ever. I went outside and it was a bad manure smell. It has been frozen for days now, I know it is a holiday but assume that is why they probably feel no one will report it.								
Comments The strength of the odor was below the regulatory threshold during the investigation; no odor violation was observed.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 52081 Concern Info The new owners ripped off siding and shingles from outer whole building. Since then we had breathing issues including wheezing and coughing. The building was made in 1930s, so I'm worried about possible asbestos in the old siding and possibly the old shingles and also the possibility of lead paint. My 1 year old granddaughter lives with me, as well as her pregnant mother. Was really hoping someone could come test.								
Comments ?Prior to receiving this concern from EPA, the concerned party contacted the Department. The concern has been investigated, and ATM Holdings, LLC, was issued a Letter of Warning for failure to inspect for asbestos prior to renovations.? Since the concern has already been investigated, no further actions are necessary at this time.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 52103 Concern Info The smell is nauseous								
Comments No violation of the odor regulation was noted.								
KCRO	1/12/2023	1/10/2023	Jon Stockman	Alma Lafayette	Open Burning	CK		
Concern No. 52149 Concern Info Jon Stockman on 01/09/2023 at 5:15 pm arrived to 31530 King Road, Alma, MO, and proceeded to start to burn a brush pile. He brought three vehicle tires from his house and ignited them. I, along with my brother David, and my mother, Beverly, witnessed this and have video and picture proof. Jon grew up on this property. His father, Larry, married my mother Beverly. Larry Stockman passed away April of 2022. My mother, Beverly Katz, has a life estate and has full access and control of the property. Right now, Jon Stockman does not have access to the property. This action was an intimidation and the fact that he brought his own tires to burn makes it malicious. Even worse, he left the fire unattended and went home.								
Comments I observed what appeared to be the remains of tire steel belting, but I could not confirm who or when this material was burned. Compliance assistance was provided by informing both the property owner and the alleged responsible party of the regulations.

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 52290 Concern Info Kelly Braymer with Kearney Feed called about air quality due to white particles in the air that looks like snow coming from PlyGem Siding. She has tried contacting the facility to complain but no call back. This happens at least twice a week and causes her employee with asthma breathing issues.								
Comments No violations were observed during the site visit. Ply Gem stated they would inspect their operations for leaks. Concerned party was put in direct touch with the plant manager. If problem is not resolved, concerned party will let the Department know. Buddy Huebner, Plant Manager, contacted me on February 17, 2023, and let me know what Ply Gem was doing to resolve the particulate matter issue. He had said that they have implemented procedures to look for any types of silo leaks and have actually purchased a drone to be able to fly over the plant to see if there is any particulate matter being released when the material is being moved into or out of the silos.								
KCRO	1/31/2023	1/27/2023	Mark Morris	Latour Johnson	Open Burning	DS		
Concern No. 52292 Concern Info Resident at location identified below is burning wood flooring (possibly engineered hardwood) in a burn barrel that is causing smoke.								
Comments No violations were observed during the investigation. An interview with the responsible party indicated he was in compliance with the open burning regulation. Information was provided to help ensure continued compliance. ?

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 52299 Concern Info CP called about an MHP that now has a homeless camp at the back of the property. The owner of the MHP is Jeffery Sheuy the CP told me that he is probably in jail, he's in and out a lot. The encampment has no hook ups and there are huge piles of trash as well as opening burning happening. The CP is worried about the pond that is close by to where this encampment is. The CP's property is to the south of this MHP. This is in the county and the sherriff seems not to be concerned about this. He told me that we have been out there before, but it is getting worse.								
Comments Violations were observed and an unsatisfactory findings letter was sent to the owners of the property.								
KCRO	2/2/2023	2/2/2023	ZMDR Republic Foods	Lone Jack Johnson	Odor	JH		
Concern No. 52337 Concern Info Horrible odor at my home from ZMDR drilling wastes								
Comments On February 2, 2023, I made a site visit. There was no odor on NW 800 Road or the facility, so I have determined that the odors are from the land application site. Since land application is exempt from the odor regulations, there are no violations?

Concerns Investigated Between December 16, 2022 and February 15, 2023

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 52347 Concern Info From Web Form - Flinn construction hauls stuff with dump trucks and pickups then pushes it in a waterway then burns it. A older gentleman complained last year getting sick from it. He said it must of been some strong chemical. He's taking a house down now and will be hauling it out there today. The old man live a couple hundred yards from where he burns. The old man said. I looked on Google maps you can see a couple spots that he might be dumping. The old man says they push dirt when there done burning this has been going on for a few years								
Comments Violations of the Missouri Solid Waste Regulations were observed and addressed with the responsible parties. On February 8, 2023, responsible parties submitted photographs verifying violations had been addressed and returned to compliance.								
KCRO	2/3/2023	2/2/2023	Flinn Construction	Maysville Dekalb	Open Dumps: Construction a Open Burning	MC		
Concern No. 52349 Concern Info CP states a house was torn down at 406 South Polk in Maysville today and possibly disposed of improperly by burning and burying. CP believes the company who tore the house down was Flinn Construction. CP thinks there will be no evidence of activity past this weekend.								
Comments Violations of the Missouri Solid Waste Regulations were observed and addressed with the responsible parties. On February 8, 2023, responsible parties submitted photographs verifying violations had been addressed and returned to compliance.?								
KCRO	2/2/2023	2/2/2023	ZMDR Republic Foods	Lone Jack Johnson	Odor	JH		
Concern No. 52352 Concern Info Odors from republic foods at my home								
Comments The odor was not detect at a 2:1 Dilution to threshold (D/T). An odor has to be detected at a 7:1 D/T, since a 2:1 is a lower concentration, than there is no odor violation. If the odor is from land application on farm land, then that activity is exempt from the odor regulations

Concern No. 52339 **Concern Info** The smell from Republic Foods was so bad when I got home

Comments On February 2, 2023, I made a site visit. There was no odor on NW 800 Road and no strong odors at the facility, so I have determined that the odors are from the land application activity. Since land application is exempt from the odor regulations, there are no violations.?

KCRO	2/15/2023	2/3/2023	Ford Motor Company - Kansas City Assembly Plant	Claycomo Clay	Other	CK		
------	-----------	----------	---	------------------	-------	----	--	--

Concern No. 52387 **Concern Info** From Web Form - There's a clear sticky substance that's gotten into the air. My family and all of my neighbors have been getting very sick. My family evacuated our house, and bought all new stuff, but it all just got contaminated again. We hired an air quality tester, and our air came back with high counts of solvent vocs. You can't see it in air or water, but if you mix the contaminated water with oil you can. It's activated by water and agitation, and hydrophilic. I was able to collect these samples by simply setting out buckets of water, and letting the substance collect in it from the air. I agitated the water, added oil and stirred it again. The pictures show the water/oil mixture, and you can see there is a film on top of the water holding up the string and paintbrush. This stuff causes me and my daughter to have "reactions" and it's all over our house and stuff. I suspect it's also on the trees outside because all of the ones in front of our house are dead.

From MERLIN - The caller states a mist or liquid white material is being over sprayed onto her house and getting into her house. Her family is experiencing health issues. Caller stated this was discovered on May 4, 2020.

Comments From the interviews conducted of the surrounding households, there were no similar concerns or incidents as to what the concerned party had relayed to us in the complaint. I did not observe any indications of an outdoor air pollution issue.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
<p>Concern No. 52356 Concern Info Yesterday, 2/5/23 as I drove past the CAFO on 50 hiway east of Lone Jack at 5:00 PM I smelled a horrible nasty odor. For a second I was baffled about its source, then I realized I had just passed the local cattle processing plant. I think maybe there is something they dump or move on Sunday evening that they don't do on other days. Could this be because inspectors are not likely to be dropping by at that day and time? I suggest that some dedicated inspector or congressperson could check this out on a Sunday evening once in awhile. I'd be willing to give them time off on Monday for interrupting their Sunday. Something that smells that bad on a beautiful sunny day with a light breeze is suspected of being unhealthy for the environment and people breathing this air. Thank you for considering extra measures to check on this issue.</p> <p>Comments The odor was not detect at a 2:1 Dilution to threshold (D/T). An odor has to be detected at a 7:1 D/T, since a 2:1 is a lower concentration, than there is no odor violation. If the odor is from land application on farm land, then that activity is exempt from the odor regulations</p>

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 52398 Concern Info The concern party said that a house in Warsaw had partially burned in December 2022, and now the owners have been burning what's left of it within the past couple of days. The local volunteer Fire Department have been out to the location since the initial fire. The owner's last name is Anderson and their son's name is Gene Anderson who lives at 1094 NW 150th Road, Holden, 64040. The son has been the one who is cleaning up the partially burned house.								
Comments Some prohibited items were observed being burned, but it appears this was unintentional. The responsible party agreed not to burn the remaining debris and have it hauled off for proper disposal. The Department will also be sending a compliance assistance letter with the Missouri regulations in it.								
KCRO	2/7/2023	2/7/2023	ZMDR Republic Foods	Lone Jack Johnson	Odor	JH		
Concern No. 52361 Concern Info It is absolutely ridiculous that we cannot even open our doors without the stench from Republic coming into our homes. This had been going on for several days this time. I suppose it's because the wind is coming from the south and we are around a mile north of this stench. This is even worse than Valley Oaks was, if that's possible. Why doesn't the Mo DNR start consider the families in Missouri instead the money?								
Comments The odor was not detect at a 2:1 Dilution to threshold (D/T). An odor has to be detected at a 7:1 D/T, since a 2:1 is a lower concentration, than there is no odor violation. If the odor is from land application on farm land, then that activity is exempt from the odor regulations								
KCRO	2/21/2023	2/9/2023	Helen Cotton	Edwards Benton	Open Dumps Open Burning Single Family Residence Wa	KB		
Concern No. 52367 Concern Info CP states neighbors recently moved in and dumping trash, perhaps burning mattresses, and no waste water hook up.								
Comments ?UF sent for waste being stored on the surface of the ground.

Concern No. 52410 **Concern Info** Submitted: 7:25 a.m. Sunday, February 12, 2023

Date of Incident or Date First Noticed: 02/08/2023

EXTREMELY strong chemical odor making eyes water and nose burn. Assumption that it is coming from Boulder industries 1.5 mile SSE of residence. This is not agriculture related smell, its not anywhere close to normal and needs addressed. I will be contacting EPA and BBB as this is not normal and absolutely is not good for human health. I have worked in the hazmat industry and have never been around this type of odor without a full face respirator with positive air. Major problem that needs addressed in Maryville, Missouri.

Concern No. 52416 **Concern Info** Submitted: 7:43 a.m. Sunday, February 12, 2023

Date of Incident or Date First Noticed: 02/10/2023

2/12/23 horrible chemical smell/exhaust seeming to come directly from Boulder Industries. Drove the direction of that facility and from what I can tell its coming from that facility. Not the first but the worst it's ever been, and has to be a major health concern specifically for one's lungs. I am all for industries like this but when what they do causes my life to be at a lower quality while in my house and out on my property.....this is a major problem.

KCRO	2/14/2023	Bolder Industries	Maryville Nodaway	Odor	JS
------	-----------	-------------------	----------------------	------	----

Concern No. 52417 **Concern Info** Submitted: 7:14 a.m. Sunday, February 12, 2023.

Date of Incident or Date First Noticed: 02/10/2023

Extremely strong chemical smell that soaks into clothes, enters the house and makes outside work miserable. Worst its ever been just about a mile north, north west of the facility. It has actually been this way at least three times this week. Is this extremely strong chemical smell safe for kids to be inhaling let alone adults?

Concern No. 52418 **Concern Info** Submitted: 7:31 a.m. Sunday, February 12, 2023

Date of Incident or Date First Noticed: 02/10/2023

Noticed on 2/12/23 but neighbors have said that its been like this all week. I know its not the first time this horrible chemical smell has happened, but this is the first time we could not even go outside without choking and coughing. It's bad enough now that complaints need to happen and legal action may need to take place. I cannot imagine what the folks who work onsite have to deal with. Kids wanted to play outside today since its so nice. That won't happen.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No.	52435	Concern Info	From David Ruby: I just received an anonymous concern regarding the demolition of University of Central Missouri's Nattington-Bradshaw Hall at 620 S. Washington in Warrensburg, Johnson County, Missouri. I tried directing the caller to KCRO but they claim to have already been in contact regarding this issue and wanted to speak to someone else. I tried looking up the notification number on our website but couldn't find any projects at that address, though I did see a few other addresses owned by UCM. The concerned party seems to be involved closely in this project and wants to remain anonymous for their safety. They claim that a full asbestos inspection was not performed on this building, only a partial inspection. They also claim that asbestos containing joints were discovered on the property, and while the owners are claiming these materials were removed, they are still in place. They said that the owners are trying to start demolition as soon as possible, and urged us to act quickly.

KCRO	2/15/2023	2/15/2023	Greenlight Grow	Kansas City Jackson	Odor	MC		
Concern No.	52436	Concern Info	I want to report a company, Greenlight Grow, 6050 Manchester Trafficway, Kansas City, MO 64130. They manufacture Marijuana / Cannabis products. Every time I drive by it on my way from / to work, I can smell Cannabis. The skunk smell is quite pungent. I am being unwillingly exposed to a Class I drug under the Federal Government. https://www.dea.gov/sites/default/files/2020-06/Marijuana-Cannabis-2020_0.pdf . "Marijuana is a Schedule I substance under the Controlled Substances Act, meaning that it has a high potential for abuse, no currently accepted medical use in treatment in the United States, and a lack of accepted safety for use under medical supervision." This is wrong as well as illegal to be exposed without request.					
Comments	This concern is located within the city limits of Kansas City, MO; therefore, the odor concern was referred to the delegated local agency, which is the City of Kansas City Health Department's Air Quality Program. The concern was also referred to Missouri's Department of Health and Senior Services (DHSS) since the facility's operations are also regulated by DHSS

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No. 52160 Concern Info It was dusty today driving by Boone Quarries..the dust was in the air.....and on the Creasy Springs RD...they aren't keeping the dust in their quarry. Also, rock on the entrance of Boone Quarries is always on the road. In fact, a rock hit my front windshield and the windshield has a crack on it now. It happened by the entrance of Boone Quarries when a truck was going the opposite way of me and the rock hit my car. I emailed Boone Quarries three times regarding this situation and asking them to fix the windshield but no response. The organization is not ethical and professional. They shouldn't be allowed to poison city of Columbia citizens with their dust.								
Comments At the time of the investigation no dust was found blowing beyond the property boundary. No violation of the Missouri Air Conservation Commission Fugitive Dust rule was found.								
NERO	1/12/2023	1/12/2023	Unknown	Columbia Boone	Fugitive Particulate Matter	RD		
Concern No. 52146 Concern Info Caller reports that a company is grinding trees, causing dust to blow onto her property so she can't leave the house. Caller is concerned about the lead and heavy metals in the tree dust causing health problems for her family.								
Comments The concerned party has been informed that the Department does not have regulatory authority over the allegations she is making. Tree chipping does not produce significant dust and does not contain significant amounts of lead except possibly in areas near lead mines or lead processing areas.

Comments	<p>began my odor surveillance on December 20, 2022 at 10:24 a.m. The weather was partly cloudy and the temperature was 37 degrees Fahrenheit. The wind was from the North at 5 miles per hour and the relative humidity was 71 percent. I began by driving along Highway 51 past the Perryville Industrial Park to State Route AC and on to James M. Eddleman Welcome Center parking lot (10:33 a.m. to 10:38 a.m.). I then drove back on to State Route AC to State Route V to Perry County Road 900 and on to Highway 61 (10:39 a.m. to 10:41 a.m.). I drove along Highway 61 back on to Highway 51 (10:44 a.m.). I drove along Highway 51 to State Route AC (10:46 a.m.). I then drove along State Route AC to James M. Eddleman Welcome Center parking lot (10:48 a.m.). I drove back on to State Route AC and along it to TG Way and turned around and drove back along State Route AC to State Route V (10:52 a.m.) to Perry County Road 900 to Highway 61 (10:54 a.m.). I drove along Highway 61 to Industrial Drive (10:56 a.m.) to Walters Lane to Corporation Lane (10:57 a.m.). I then turned around on Corporation Lane and returned to Walters Lane and drove out to Highway 61 (10:58 a.m.). I drove down Highway 61 to Highway 51 (11:00 a.m.). I stayed on Highway 51 to Toohey Drive and drove along Toohey Drive turning around and driving back on to Highway 51 (11:01 a.m. to 11:03 a.m.). Next, I drove along Highway 51 to State Route AC to James M. Eddleman Welcome Center parking lot (11:04 a.m.). I remained at James M. Eddleman Welcome Center until 11:10 a.m. and then I drove on to State Route AC toward State Route V and to Perry County Road 900 (11:12 a.m.) and on to Highway 61. I then drove along Highway 61 to Highway 51 (11:15 a.m.). I drove on Highway 51 to Toohey Drive (11:17 a.m.). I travelled back on to Highway 51 to State Route AC where I paused at the side of the road away from TG Missouri for a moment and then drove back on to State Route AC to James M. Eddleman Welcome Center parking lot (11:22 a.m.). I reentered State Route AC and I drove to State Route V then to Perry County Road 900 (11:24 a.m.) and then on to Highway 61 (11:26 a.m.). I drove down Highway 61 to Highway 51 (11:27 a.m.) I then drove to Toohey Drive and remained until 11:31 a.m. Finally, I left the area (11:31 a.m.).</p> <p>When I finished my odor surveillance, the weather was sunny and the temperature was 40 degrees Fahrenheit. The wind was from the North at 6 miles per hour with gusts up to 11 miles per hour. The relative humidity was 56 percent. All odors noted during this odor surveillance were faint and included wood smoke and diesel truck exhaust. No odor plume was found in the area near TG Missouri's property described in this environmental concern. It should be noted that the City of Perryville has maintenance and upkeep responsibility for the walking trail around TG Missouri mentioned in this concern. However, the property lines for TG Missouri Corporation are unchanged. This odor surveillance was conducted on property not belonging to TG Missouri Corporation.</p> <p>I spoke with Dylan Carpenter, Senior Environmental Specialist with TG Missouri Corporation, on January 3, 2023. He stated that he would get back with me and let me know if there had been any malfunction or upset conditions around the area of the plant described and during the timeframe mentioned in the environmental concern. I received an electronic mail from Dylan Carpenter on January 6, 2023 stating that his inquiries did not find anything in the way of a malfunction or upset condition, but TG Missouri did do a lot of cleanouts and maintenance over the shutdown. He finished by saying that we will see if that work by TG Missouri helps mitigate against future issues.</p>

Comments	<p>On 12/20/2022 a site visit was conducted by Water Pollution Control Program staff Trevor Carihfield (investigation originally assigned to WPCP). He left County road 427 near Williamsville, MO and traveled up the road about 3/4 of a mile, at this point he was unable to go any farther due to worrying about getting his vehicle mired up in the worksite. From what he saw, the materials onsite were being stored in buildings or covered by tarps. No water runoff concerns were identified leaving the property.</p> <p>The site was referred to the Solid Waste and Air Pollution Control Program on December 20, 2022. Mr. Carihfield advised that he did not view the referenced pile in google earth aerial photo, but did not go far enough to view this. No other solid waste concerns were viewed.?</p> <p>?On 12/22/2022, Dawson Bennett, Env. Specialist and I visited the listed address of the concern. There were some workers present, but there was not anyone on site at the time of the visit that could give permission to view the site. We stopped by the Buffington Brothers' office and gave them various fact sheets on asbestos, waste disposal, and demolition waste.</p> <p>I spoke with Stan Buffington multiple times discussing proper waste disposal and to ensure that asbestos is properly inspected and removed before an projects might be conducted. Mr. Buffington said he would provide photos of the materials they have on site. He described it as primarily containing concrete, wood, and old hay that couldn't be used for feed.</p> <p>Mr. Buffington had made various attempts at providing photos, but failed to do so. On 1/13/2023, I visited the office again and Stacy Rommel provided the photos to my email. Some nylon material appeared present as well.</p> <p>On 1/18/2023, I had another discussion with Mr. Buffington in regards to the materials and he agreed to pull the synthetic materials from the pile and to ensure it is only used for clean-fill type materials. We also discussed burning residential waste and to ensure that contractor waste from the business is not burned or buried.</p> <p>Conclusions</p>

Concern No. 52177	Concern Info Two homes that were dilapidated were burned and such I found later on many months later that these homes had asbestos siding and it wasn't properly removed. I don't know what that means for me and my kids who have lived next to these homes since 2012, so I done some research and have become very concerned. The pile of rubble that still lies there is riddled with asbestos siding. And I know it's most dangerous when being moved or disturbed but this was clearly disturbed or there would not be a pile of rubbish. I can't really take pictures at this moment because it's so cold and I'm on bed rest. My mother was burned alive in her home the day before thanksgiving. so needless to say I am trying to find my way thru it all. I've been trying to do this report for weeks but I havn't been able to wrap my head around it. It's two lots, side by side, on the corner lot and one next to that and then my house is on the third lot, 205 E. 4th ST, Dixon, MO 65459.

Comments	<p>On January 9, 2023, I called the City of Dixon to see if anyone had been aware of the two buildings, mentioned by the CP, being burned down. I was referred to the Dixon Police Department. Upon calling the police department, I was informed that the Police Chief was under the impression that these two buildings were "pushed over" rather than burned down.</p> <p>On January 10, 2023, I visited the address mentioned in the concern at approximately 11:45 AM. I could see where two structures once stood. Both buildings were down to their foundations. The easternmost building had debris both on the foundation and scattered around the foundation including brick, metal, and other various debris. The westernmost building had debris on its foundation including garbage, metal, wood, and various other debris. There were a lot of trees around these foundations making it hard to see. I was able to take pictures from E 4th Street and the public sidewalk that lay in front of the structures. I could not identify any siding from where I was located.</p> <p>On January 12, 2023, I called the CP and left a voicemail explaining my findings. Similarly, I called the property owner of the two destructed buildings, Tanya Solan, and left a voicemail.</p> <p>On January 13, 2023, Tanya Wilfong (Solan) returned my call. Speaking with Tanya, I was informed that these two structures were over 100 years old and belonged to her mother. Once her mother passed, she took ownership. Roughly 10 years ago, the buildings were condemned and things such as the roofs, siding, doors, and porches were removed. Approximately two years ago, Tanya rented some heavy mobile equipment and pushed the buildings over. More recently, some of the trees on the property were posing an electrical fire risk with the electric lines overhead. So, Tanya took some trees down and burned them on the foundations of these old homes.</p> <p>?It seems to me that the CP may not have been aware that the siding of these buildings were removed some 10 years ago. The CP likely may have thought that when the trees were burned, so was the siding of these houses.</p> <p>Neither of the buildings mentioned by the CP were burned down. Instead, the siding, along with the roofs, doors, and porches, were removed from these homes 10 years ago when they were condemned. The buildings were pushed over with heavy mobile equipment two years ago and some trees were burned at this location due to them being a potential electrical fire risk.</p>							

40 CFR Part 61 Subpart M - National Emission Standard for Asbestos was taken into consideration for these two structures being demolished adjacent

--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

Comments arrived at 12247 County Road 637, Dexter, MO at approximately 10:50 AM on January 17, 2023. I knocked on the door of the building several times, but there was no answer. I looked up Hessling Construction Inc. on Google and got a phone number for them . I dialed the number, (573) 614-5850, and spoke with Brad Hessling's wife. I gave Mrs. Hessling my credentials and explained that I was at 12247 County Road 637 for an environmental concern. Mrs. Hessling told me that they have moved their main office more towards town and that this address was basically just a shop for them.

I explained to Mrs. Hessling that we received an environmental concern describing the dumping of hydraulic oil, motor oil, and other used oil products into a large hole on the property. I informed her that it was also mentioned that some burned heavy equipment had been buried as well. Mrs. Hessling was not aware of any used oil products being dumped, but did tell me that they had an excavator and a dozer down in Cash, Arkansas that had burned. They got the dozer back from the insurance company and hauled it back to Dexter because some parts were still functional and could be used to replace broken pieces on other equipment.

Other than that, Mrs. Hessling had no knowledge of anything else happening at this site. Mrs. Hessling took down my name and number and gave it to her husband, Brad Hessling, who was out looking for projects during our conversation.

Not too long after I hung up with Mrs. Hessling, I received a phone call from Brad Hessling. I relayed all the information that I had told Mrs. Hessling to Brad. He repeated the same information that Mrs. Hessling had said about the burned equipment from Cash, Arkansas. As for the dumping of used oil products, Mr. Hessling was unaware of anything like that going on. He explained that there was a small apartment on the property they owned where a man lived. Brad had evicted that man who became irate and Brad believes that that man is likely the person who called in the concern.

Brad brought up a pile located at the 12247 County Road 637 address that he had questions about. He asked what could and could not be burned. I informed Brad of Missouri's open burning regulations and explained to him exactly what could and could not be burned. Mr. Hessling thanked me for my time and concluded the phone call. ?

Conclusions

?While at the 12247 County Road 637 address, I could see no evidence of any used oil products being buried. Mr. Hessling has no knowledge of any used oil products being buried, but thinks that the Concerned Party may be an evicted former renter of his, who probably made the concern call out of anger. Mr. Hessling did explain about the burned excavator and dozer, one of which (the bull dozer) was brought back from Cash, Arkansas to be used for parts. No evidence of any violation was found.

<p>Concern No. 52338 Concern Info CP states meat market incinerating leftover, unused carcasses. The smoke and smell fills a large area around the market and can be smelled from inside homes. Concerned about danger of breathing the smoke of carcasses.</p> <p>Comments Todd Raney stopped by this location on January 12, 2022 to confirm that the facility did have an incinerator. Mr. C.J. Mercille, Owner, stated that he is the contact for the facility. C.J. Mercille stated that this facility has had the incinerator for a year or two; but that they were not made aware of any air permit requirements and consequently, they do not have an air construction permit.</p> <p>On January 26, 2023, I, Dawson Bennett, was able to get ahold of C.J. Mercille, Owner of Mercille's Meat Market. C.J. informed me that the incinerator is a National Incinerator HD500. On their website, National Incinerator lists the HD500 as an "incinerator for swine disposal." C.J. says he uses the incinerator for mainly bones and hide. It isn't used very often at all. Since a few days before Todd Raney showed up, the incinerator has not been used at all. C.J. told me that he picked up the incinerator a couple years back in Alabama.</p> <p>I discussed with Mr. Mercille that in order to operate an incinerator commercially, he needed to have an air construction permit. I gave Mr. Mercille the contact information for Mr. Ryan Reed in our Permits Section in Jefferson City so that he could further assist Mr. Mercille with explaining the steps required to obtain an air construction permit for his incinerator if he chooses to go that route. I explained to Mr. Mercille that his other option is to cease operation of the incinerator altogether. I told Mr. Mercille to please get back with me after speaking with Mr. Reed and inform me on what his intentions are. I further explained to Mr. Mercille that due to his operation of an incinerator without an air construction permit, I would be issuing him a Letter of Warning (LOW). I explained that this LOW would outline the whole situation and provide "required actions" that would need to be taken in order to return to compliance.</p> <p>A Letter of Warning (LOW) was issued on February 1, 2023 to Mercille's Meat Market due to operation of a commercial incinerator without having an air construction permit.</p> <p>Mercille's Meat Market has been operating a commercial incinerator without having obtained an air construction permit. This is a violation of 10 Code of State Regulations 10-6.060 Construction Permits Required. Mercille's Meat Market was issued a Letter of Warning (LOW) on February 1, 2023 for the violation. Mr. C.J. Mercille, Owner, will get back with me after speaking with our Permits Section to decide if he will get an air construction permit or cease operation of the incinerator altogether.</p>

Concern No. 52170 **Concern Info** RP is junking and burning in a big hole. Dawson has been to location.

Comments I arrived at 2469 County Road 638, Fisk, MO at approximately 11:40 AM. Upon my arrival there was no active open burning of any kind that I could see. There was a gentleman outside the front of the house whose attention I got and was able to speak with. The individual did not give a name. I asked the gentleman if a Carla Harris or Carla Wade was home. The man said that neither one of the women were home at the moment. I explained to the gentleman why I was there and asked him if he had been burning anything recently. The man pointed to a spot toward the front of the house and said that he had just finished burning leaves.

I explained to the gentleman that burning leaves is allowed and informed him that only vegetative waste, untreated wood waste, and household waste are items not prohibited from being open burned as described in 10 Code of State Regulations 10-6.045 Open Burning Requirements. The gentleman agreed that he would only burn those things and that no other materials would be burned. I informed the man that I had been here before and spoke on the phone with Carla Harris. I asked him to give Carla my business card and for her to give me a call when she returned. The gentleman agreed to relay the information to Carla.

Upon my arrival, I could not see any signs of an active fire. The gentleman I spoke with claimed that he had just finished burning leaves, but I could not see any signs of any prohibited items being open burned. I explained to the gentleman what could be burned and asked him to give my business card to Carla Harris when she returned to which he agreed.

Concern No. 52172 Concern Info CP states they smell gas when it rains very badly. Gives a strong odor inside & outside the building. So bad it gives headaches								
Comments The concern was referred to the Department's Emergency Response Spill Line. The Spill Line was contacted regarding the site, based off past history at this location. The site had an approximate release of 15,000-17,000 gallons of gasoline subsurface. Based off the past history of the location, the site is being referred to the Department's Emergency Response. Further response efforts will be conducted by Emergency Response.								
SERO	1/20/2023	1/20/2023	Unknown	Oregon	Open Burning	HC		
Concern No. 52221 Concern Info The caller reports that a person has been burning tires from old semi-trucks at this location for a long time. There is always a pile of tires at the location and a burn area nearby. The caller did not have an exact location but said it was on Highway T about 4 miles south of the MM intersection. You can't miss it and if you reach Highway 99 you went too far.								
Comments I arrived to the location I believe to be described by the concerned party around 2:00 p.m. on January 20, 2023. I was unable to discern if anyone was at the residence at the time of the inspection. The property I assume to be the source of the concern does have semi-truck and trailer tires scattered around the property. An aerial view of the property seems to show trails around the piles. The trails around the piles may imply the tire piles are accessed semi-regularly. There are clear burn areas on the property visible from the road. I was able to stop on a side road just off of T highway to take pictures and view the burn piles. I was unable to note any tire or rubber remnants in the burned areas. Due to no trespassing tape, I did not approach the property and was unable to leave contact information or factsheets for the owner. I have passed the information on to Jesse Evens, who works in the Solid Waste Unit of the Southeast Regional Office, for his information. ? The situation at this property has been noted so that the Department has information in case the problem persists.

SERO	2/3/2023	2/2/2023	Holcim US Inc. - Ste. Genevieve Plant 186-0044	Bloomsdale Ste. Genevieve	Fugitive Particulate Matter	TR		

Concern No. 52407 **Concern Info** Holcim cement is supposed to be a dust free environment; but you can walk through any of the woods and see cement all over the trees and a thick cloud in the air consistently.

Comments I was contacted by telephone by Andrew M. Horrell, Environmental Manager for Holcim (US) Inc., on February 3, 2023 when he returned my voicemail from February 2, 2023. I discussed this concern and asked for his assistance and for any information that was pertinent. Mr. Horrell stated that the site is 4,000 acres. Over half of the property is set aside for conservation. A conservation buffer lies all the way around them. He stated that it was approximately 1/2 mile to the fence from equipment that produces and handles the cement. Holcim has a working relationship with the adjacent landowners and has solicited information in regards to any problems the landowners see. There are several miles of boundary and this makes it difficult to know which wooded area the Anonymous Concerned Party meant. Hunters may trespass on to the property by accident and are informed that the property is private and is posted for no trespassing. The Ste. Genevieve Sheriff's Office would be asked to assist if any hunter decided to return.

Mr. Horrell stated that one rawmill had been down at the time this environmental concern was received. The one rawmill's non-operational status means that the kiln was operating at a reduced production rate. There was no malfunction that would have potentially resulted in an increased emission rate, however. According to the 2021 data EIQ the annual PM10 for this facility was 465.7929 tons and PM2.5 was 428.9854 tons.

I made an unannounced visit to Holcim (US) Inc. in Bloomsdale on February 9, 2023. I made visible emissions observations with Andrew Horrell of the plant equipment that produces, conveys, and loads out the cement at Holcim. Beginning at the rawmills, observations were made through the plant that included material storage areas, fuel storage and handling areas, conveyors, the kiln, finish mills, cement storage silos, truck loadouts, etc. These observations ended in the harbor with observations of the barge and railcar loadout areas. No visible emissions were noted from any of this equipment. The only fugitive emissions I observed were from the facility haul road as I exited the facility. The fugitive emissions from the haul road were not excessive, were brief and did not leave the property.

No violation of 10 Code of State Regulations 10-6.170 Restriction of Particulate Matter to the Ambient Air Beyond the Premises of Origin was observed during the on-site investigation.

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations as it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No.	52381	Concern Info	CP states The City of Houston has their regular maintenance employees and contracted prison work release inmates removing asbestos from a structure that was donated to the city in a will. The employees are using heat to remove asbestos tile on the floor of the structure, and some of the employees are wearing masks. There is no other safety protocol which is currently implemented. This home was donated to be used as a public park with the house to remain intact. It is in a residential area.					
Comments	<p>On February 8, 2023, I called the phone number given in the concern report for Willy Walker ((417) 967-3348). This number was directed to the City of Houston City Hall. I asked to speak with Willy Walker, who is the mayor of Houston. Mayor Walker was out of the office at the time so I explained the reason for my phone call and was redirected to Mark Campbell, City Administrator. Mark was also out so I left a message for him.</p> <p>Soon after, I received a phone call from Mark Campbell. I explained to Mark that we received a concern regarding the removal of asbestos from a structure that was donated to the city in a will. I asked Mark if this home was planning to be renovated or demolished and whether the city had plans to renovate or demolish any other structures for this year. Mr. Campbell told me that this structure would be demolished and that the city had no plans to demolish any other structure this year; this structure was the only one.</p> <p>Mr. Campbell informed me that they did get an asbestos inspection done on the structure prior to abatement and he sent me a copy of that asbestos inspection report as well. Additionally, Mr. Campbell said that any asbestos containing material (ACM) would be bagged separately and disposed of accordingly. The only ACM identified in the report was floor tile. Mr. Campbell seemed to be aware of the asbestos regulations.</p> <p>?I thanked City Administrator Campbell for his time and the information given and encouraged him to contact me if he had any questions or concerns regarding asbestos. I then concluded the phone call.</p> <p>The building being abated is a residential structure located at 1001 West Highway 17 in Houston, MO. According to Mr. Mark Campbell, City Administrator, this is the only structure that is going to be demolished by the city this year. This structure was inspected for asbestos prior to being abated. The asbestos inspection report is attached to this concern form. All ACM will be bagged separately and disposed of accordingly. The only ACM identified in the report was floor tile. Under Title 40 Code of Federal Regulations Part 61 Subpart M---National Emission Standard for Asbestos this structure is exempted in the definition of facility because it is a residential building having four or fewer dwelling units. For this reason, no violation of the applicable state and federal air regulations has occurred.</p>

Concern No. 52392 **Concern Info** Burning big tractor tires in wood piles.

Comments On Friday, February 3, 2023, I drove by the location of concern at approximately 3:50 PM. I was given the directions that the open burning was occurring just past the first house on the right once you pass the train tracks on Zimmerman Lane in Bernie. I could not immediately see any signs of open burning in that area. I called the CP, Christopher Spitzer, and explained to him that I was in the area of the concern, but was not able to see much and asked if he could better explain where the burning was occurring. Chris told me that the burning was taking place on the opposite side of the road. From there, I could see the items that Chris was mentioning. I thanked Chris for the information and concluded the phone call.

The first house on the left once you pass the train tracks on Zimmerman Lane is a metal house. Just behind this metal house is a field. In this field, I was able to see a pile of wood waste that looked to be mainly medium-sized trees (Chris Spitzer told me that Dale Young took down a tree line that ran North to South in that field). Additionally, I could see a small excavator and a trailer with several tractor tires on it. A bit further behind all of this was what looked to be a burn pile. However, all of this was a good distance away from Zimmerman Lane where I was taking pictures from, so that I was unable to clearly see any evidence of any tires being burned in that pile.

On February 7, 2023, I called Tracy Young of D & T Young Farms Inc. (the listed property owners of the field with the burn pile). Tracy said there was a "poor connection" and that he couldn't hear me. I told Tracy I would call again later. Soon after, I received a phone call from Dale Young of D & T Young Farms Inc. Dale was returning my phone call that I had just made to Tracy. I explained the situation to Dale and informed him of the environmental concern we received regarding the open burning of tires in his field. Dale informed me that there was nothing but brush being burned in his field. Dale did tell me that he was under the impression he could burn his tires on his property, however. I told Dale that under our state's open burning rule, 10 Code of State Regulations 10-6.045 Open Burning Requirements, the burning of any tires is prohibited in the state of Missouri.

I gave Dale the contact information for Josh Wilkerson, Environmental Program Manager at the Southeast Regional Office, for if he had any questions of what he could do with his tractor tires as far as disposal or other options.

Dale Young of D & T Young Farms Inc. informed me that he is only burning brush in his field near Zimmerman Lane in Bernie. From photos that I took from Zimmerman Lane, a burn pile is visible in the background, but is too far away to clearly tell whether any tires had been burned. I informed Dale that any burning of tires is prohibited under 10 Code of State Regulations 10-6.045 Open Burning Requirements. I also gave Dale the contact information of Josh Wilkerson for questions regarding proper disposal or other means of removal of his tractor tires.

Concern No. 52394 **Concern Info** CP states his neighbor who rents dumps scrap and then puts a tire on it to burn it. On Friday he burnt about 20 tires. There are also campers in the same locations that let the sewer run on the ground.

Comments Jesse Evans and I arrived at 750-850 Post Oak Road, Wappapello, MO 63966 around 9:00 a.m. on February 9, 2023. Where we met with Darcie Danahy, who explained that the property owner has been hospitalized and they have begun trying to clean up this property. Darcie Danahy explained that she had worked for a fire department and was very deliberate about what would be burned on the property. There was a small burn pile on site, but it was not apparent that there were any prohibited materials in it. She explained to us that there had been some tensions between herself and a neighbor recently. Darcie Danahy explained the property is being cleaned up and that no more materials are being brought on site and there is minimal open burning. No tires or rubber products are being burned on site. I provided Darcie Danahy with factsheets on "Open Burning Under Missouri Regulations - PUB 2047", "Management of Scrap Tires Factsheet" and Missouri Air Conservation Regulation 10 Code of State Regulations 10-6.045 Open Burning Requirements. Darcie was receptive of the information and very civil during the investigation. We thanked Darcie for her time and provided information and business cards and left the property.?

No violations at this time. If the concern persists there need to be at least two employees sent to investigate.

Comments	<p>I arrived at the St. Francois Health Center located at 1025 West Main Street in Park Hills at approximately 10:45 AM. From the parking lot, I called Mark Bonney who was the Air Sampling Professional for this abatement project. I informed Mark that we had received an environmental concern relating to the containment of the abatement project as well as the concerned party saying they could taste dust in the air. I asked Mark if he was aware of any discrepancies with the abatement or if he noticed anything out of the ordinary. Mark informed me that there was nothing out of the ordinary with the abatement. In fact, Mark was able to give me the dates for the three air clearance samples that were taken from the project: January 24, January 31, and February 3. Mark told me that all three samples came back good and met the clearance criteria. A post-notification was submitted for this project as well which outlined the air clearance samples more in depth.</p> <p>Mark told me that Schemel Companies was completely finished with the abatement project not long after that last air clearance sample on February 3. I thanked Mark for his cooperation and ended the phone call.</p> <p>After speaking with Mark Bonney, I contacted Jake Dudenhoeffer, Project Manager. I explained the environmental concern that we received to Jake just as I did with Mark. Jake reiterated the same thing that Mark had said. Jake told me that Schemel Companies was completely done with abatement and had containment entirely deconstructed by the end of the day on Monday, February 6, 2023. Jake also said that he didn't notice anything out of the ordinary with the containment. Jake did mention that Brockmiller Construction came in soon after the abatement to start the renovation process. He suggested that they were likely in the Health Center doing work when the concern came in on February 10, 2023. Jake gave me the phone number for Andy who is the Superintendent for Brockmiller Construction. I thanked Jake for his time and ended the phone call.</p> <p>I called Andy with Brockmiller Construction and explained the situation to him and he mentioned that he was at the Health Center currently so I went to go speak with him in person. Andy told me that he thought Schemel Companies did a great job with the abatement. Andy explained what his crew was doing at the moment including putting in some new ceilings. Andy did mention that they removed some flooring which came up clean, but there was some glue still stuck to the concrete that they used a buffer on to get up. He said the dust the concerned party was supposedly tasting could have been some dust from general construction work, but Andy also showed me the air purifier that was used while the buffer was going. After walking through the Health Center for a bit, I thanked Andy for his time and left the site.</p> <p>This concern was received on February 10, 2023, but Schemel Companies was completely finished with the asbestos abatement and had the containment completely deconstructed by the end of the day on Monday, February 6, 2023. Post-notification showed waste receipts as well as in-depth analysis on the air clearance samples that were taken. The air clearance samples all came back <0.01 f/cc. Brockmiller Construction came in soon after the abatement to begin renovations and it is likely that the concerned party mistook the open area where construction was occurring as the</p>

			abatement containment and the potential taste of dust in the air could have been from the renovations going on after all asbestos was removed from the building.					
			There were no violations of Title 40 Code of Federal Regulations Part 61 Subpart M - National Emissions Standard for Asbestos.					
SERO	2/17/2023	2/14/2023	Ronald Thiel	Iron Mountain Lake St. Francois	Open Burning	HC		

Concern No. 52610 **Concern Info** The caller reports her mother is experiencing the burning of house renovation waste by her neighbor. It has been going on for 2.5 to 3.5 years. On the date of the latest event, the affected person had to leave her house because of burning smoke in strong concentration in her house. The burning was reportedly within 20 feet of her house. This person burns all forms of waste building materials, including insulated electrical wire. The person doing the burning is reported to have an aggressive attitude and the caller encouraged Department staff to request law enforcement assistance when conducting an investigation. The affected person is Kathy Merrims 314-422-8122.

Comments On 01/17/2023 I spoke with City Clerk Shannon Keith via phone regarding Ronald Thiel and his standing in the community. She informed me that there has not been any other reports or problem regarding to Ronald Thiel besides what comes from Kathy Merrims. She informed me that Iron Mountain Lake does have a burn ordinance and does issue burn permits which is a signed legal document that lists materials that are not allowed to be burned. Shannon Keith sent me a copy of the signed burn permit. Iron Mountain Lake does not have any officers which is why tickets have not been issued in the past, St Francois County will not issue tickets because they do not have a county wide burn ordinance. I was provided a Cuba Missouri address 194 Idlewild road, Cuba Mo, 65453. ?

A site visit was conducted on 02/27/2023 around 2:00 p.m. The house was unoccupied so I was unable to access the property. Viewing from the drive way I was unable to see any areas that would suggest burning of building materials had been taking place. I left several factsheets in a highly visible area on the front porch those factsheets included "Facts on Open Burning under Missouri Regulations - PUB 2047", "Managing Construction and Demolition Waste - PUB2045" and "Illegal Disposal of Construction and Demolition Wastes - PUB-2251" as well as a business card for contact information.

No violation at this time. Situation is worth monitoring.

SERO	2/17/2023	2/15/2023	Cowtown Express, Rolla	Rolla Phelps	Asbestos	DB		

Concern No. 52757 **Concern Info** There is a former carwash that was recently demolished at 1009 S. Bishop Avenue in Rolla, MO.

Comments On February 17, 2023, I contacted Rolla City Hall in an attempt to get information on the recent demolition of the Cowtown Express carwash in Rolla. I was directed to Steve Flowers, Community Development Director. Steve was able to email me a copy of a demolition project-specific permit of the type that the City of Rolla issues for all demolition projects within the City of Rolla. From this demolition permit, I was able to find contact information for the demolition contractor, Reliable Excavating.

?I called Reliable Excavating on February 22, 2023 and spoke with Doug Sherfy, Owner of Reliable Excavating. Speaking with Doug, he stated he was not aware of any asbestos inspection being conducted on the building prior to demolition nor did he notify the demolition project. According to Doug, the waste was taken to the Prairie Valley Landfill in Cuba, with the exception of some clean fill.

Reliable Excavating is in violation of Missouri Air Conservation Regulation 10 Code of State Regulations 10-6.241 Asbestos Projects - Registration, Abatement, Notification, Inspection, Demolition, and Performance Requirements and Missouri Air Conservation Regulation 10 Code of State Regulation 10-6.080 Emission Standards for Hazardous Air Pollutants adopting by reference Title 40 Code of Federal Regulations Part 61 Subpart M - National Emission Standard for Asbestos.

A Letter of Warning (LOW) was issued on March 9, 2023 for the violations listed above

Cowtown Express was demolished by Reliable Excavating without the required inspection for asbestos-containing materials and without the required demolition project notification. Reliable Excavating is in violation of Missouri Air Conservation Regulation 10 Code of State Regulations 10-6.241 Asbestos Projects - Registration, Abatement, Notification, Inspection, Demolition, and Performance Requirements and Missouri Air Conservation Regulation 10 Code of State Regulation 10-6.080 Emission Standards for Hazardous Air Pollutants adopting by reference Title 40 Code of Federal Regulations Part 61 Subpart M - National Emission Standard for Asbestos. ?

Reliable Excavating was issued a Letter of Warning on March 9, 2023 for these violations.

SLRO	12/16/2022	12/16/2022	Unknown	Jefferson	Asbestos	DR		
Concern No. 51942 Concern Info Jeremy Cameron called to report his neighbor is rehabbing their house, removing siding and other materials that may contain asbestos. They are not using any precautions to prevent asbestos dust from getting into the air, and not disposing of the waste properly.								
Comments ?I spoke with the concerned party more on 12/16/22. I explained that single family residences were exempt from all of our asbestos regulations. He told me that the property was once used as a welding business, around 30 years ago. I said I would look into this. I proceeded to contact the APCP and the other regions to make sure that if a structure used to be commercial, then we could enforce NESHAPS even if it was currently used as residential. The answer that I received is that we can, but we would need solid proof that it used to be commercial. It would also be difficult to enforce since the property looks like a typical single family residence, and not a business. I called Jefferson County Planning and Zoning on Monday 12/19/22 and they told me that their tax records only went back to 2002, and that as far as they could see the property has been taxed as residential and used as residential. I asked them if they could look through any historic files and they said they would contact me if they found anything. I called Mr. Cameron afterwards, around 9 AM, and explained that if we didn't have any tax/other documents to prove the property was commercial at one point, then we would have to treat it as residential. I explained again that we could only enforce federal NESHAPS, which specifically excludes single family residential properties. Mr. Cameron was very upset. I empathized with him, explained that a county could enforce stricter regulations (like St. Louis County does), but that we could not enforce regulations that didn't exist. Mr. Cameron told me he would be contacting lawyers and news outlets, and ended the call with me. ?

Comments	12/20/22 I e-mailed the concerned party and asked for more information (how often do you notice the odor, is it strongest at a certain time/day of week, etc.). 12/21/22 I did not recieve a response so I called and spoke to the concerned party. They told me the odor came and went and was very unpredictable. They said it was a strange musty chemical odor. I told them that I had looked up the address and didn't see anything nearby that I would expect to cause such an odor. I asked if the odor was currently strong and they said it was not noticeable right now. I said that we could go investigate but we wouldn't likely be able to find anything unless the odor was very strong. I gave her our number and instructed her to call the office when it was very strong, and let us know that it was an unpredictable odor, and that we would do our best to get out there quickly to try and track it down.

Concern No. 52089 **Concern Info** Spoke with a concerned party (CP) that chose to remain anonymous regarding the open burning of vegetative waste that is taking place by Peaceful Valley Properties HOA. The CP stated that the HOA will collect and transport the vegetative waste from the residents of the HOA. The HOA will take the vegetative waste to a property within the neighborhood owned by the HOA, and dispose of the waste by open burning. The CP was wanting information on the open burning regulations within Missouri, and wanted to know if what the HOA was within the allowed regulation. The CP stated that it is strictly burning of vegetative waste, and that the burning is not always supervised at all times. I told the CP that the burning of the waste is allowed, but the burning does have to be supervised at all times. The CP also stated that they were not sure if the burning was taking place at least 200 yards away from the nearest occupied structure. I explained to the CP that I would send out a fact sheet and compliance assistance letter to the HOA to inform them of what was exactly allowed by 10 CSR 10-6.045

Comments Sent compliance assistance letter and fact sheets to Peaceful Valley Properties HOA. No violations of 10 CSR 10-6.045 were noted at the time?

Comments	<p>1/3/22 - DBR - I reached out to WPC to ask if there have been any recent updates on this issue, as I know they are aware of the issue and there have been discussions on possible upgrades/regulatory actions that we can require. I will update the form when I hear more.</p> <p>I (Lemma Zewdie) visited the site on January 9, 2023. The wind was 4 MPH out of south and the temperature was 38 F with 80 percent humidity. I drove around and talked to people walking. They told me there is odor originating from the waste water pump station but it is hit and miss. I walked through the pump station (back and front of the building). There was nobody there at the time of my investigation.</p> <p>Even though I did not smell anything, I went ahead and used my nasal ranger and took readings at 7 different dilution to threshold ratios (D/T ratios) in two trials at two different locations, one at the front and one at the back of the building. D/T ratios I used were 60:1, 30:1, 15:1, 7:1, 4:1, and 2:1. No odor was detected at any one of the ratios.</p> <p>I called the concerned person (Lacey Munzer) at 636 279 0895. I explained what my findings were. I also told her that the City is studying the possibility of installing an odor scrubber in the future. The caller thanked the Department for coming out to investigate the odor concern. She pointed out to me that the best time to come for this odor investigation is during summer time. Most of the time, odor? comes in afternoons than mornings. No further investigation is needed at this time.</p>

Comments ?Read concern several times but did not see anything in it that sounded like an environmental issue, or any issues that we had regulatory authority over. Concerned party references a quarry but the address provided is a boarded up building in downtown St. Louis City. No quarries or other regulated facilities near the address. Concerned party references pollution in the Mississippi River but is not specific as to a time/source, sounds like this is referencing events that took place in the past. Could not find any more information online regarding these events.								
SLRO	1/4/2023	1/4/2023	Unknown	Jefferson	Open Burning	DR		
Concern No. 52088 Concern Info A caller wanted to issue a concern regarding their neighbors manufacturing meth, a practice which has been occurring for several years. Along with the meth, the neighbors are burning "toxic stuff" such as TV, plastic, microwaves. According to the caller, they are also taking the residual meth waste and burning that as well. The neighbors have had dozens of burn pits around the property and in the wooded area behind their house, even some that have been on the caller's property. The burning happens at random times during the day and has caused headaches and smells extremely bad. There have been a bunch of people coming and going out of the house, but the property owner (Carol Lake) doesn't actually live there. According to the caller, the walls are decaying and the roof is caving in. The caller has informed the police and sheriff's Department, as well as Jefferson County's Code Enforcement agency, but has either been ignored or responded to insufficiently. The caller has also been in touch with Jefferson County's Waste Department because there was damage to one of their water pipes so they believe someone is stealing water or piping.								
Comments ?1/4/23 - Looked up property on parcel viewer, found owner name Carole Luke, mailing address is 4327 Maroon Court, St. Louis MO 63123. Did not see any burn pile from Google Maps Street View (Nov 2022). Most burning likely taking place behind house. Due to safety concerns (illicit drug manufacturing) and poor visibility from street, we will send a letter/fact sheet to the property owner but we are not visiting the site at this time. 1/6/23 - drafted compliance assistance letter, sent to typing.

Comments	<p>?1/9/23 I raised the issue with Lemma Zewdie, who recently inspected Ashley Energy in November 2022. I then tried calling the number given but got a busy signal. I sent the following e-mail to the concerned party:</p> <p>"Thank you for contacting our department regarding your concern. I am the air unit supervisor here in the St. Louis Regional Office and I was given your contact information. I tried calling at (599) 906-6220 but kept getting a busy tone – is this number correct?</p> <p>We are currently looking into your concern and will contact Ashley Energy to make sure they are aware of this issue. I did want to get a bit more information from you. Where specifically is the steam coming from – is it from a leak/sinkhole, and if so, what is the approximate address of the leak? Do you happen to know if these lines are owned by Ashley Energy or by the City of St. Louis? Is there any noticeable odor to the steam?</p> <p>Steam by itself is not regulated pollutant since it's just water vapor – do you suspect any particular compounds/chemicals in the steam that could be causing health issues?</p> <p>Lastly, have you reached out to the City to report this issue yet? We won't be able to do anything about the sinkholes/property damage, so I want to make sure you speak with someone who can help you with these issues. You can contact the City of St. Louis Citizen's Service Bureau at 314-622-4800 and hopefully they can point you in the right direction.</p> <p>I can tell you that Ashley Energy is regulated by our department and has an Operating Permit through the Air Pollution Control Program. We inspect them regularly to make sure they comply with this permit. All of our permits are available to the public at Issued and Pending Air Permits Missouri Department of Natural Resources (mo.gov)."</p> <p>Later that day, I recieved a call back from Mary. Al's Restaurant is at 1200 N 1st St, St. Louis, MO 63102, located right next to Ashley Energy. The issue is with the property directly behind Al's, which is a vacant asphalt lot with lots of cracks and sinkholes, where steam is frequently 'billowing out.' She said there is often an odor along with the steam, but it could be coming from the asphalt or something else. She described it as an asphalt/sewer smell. The property is owned by a realty company that leases it out for parking for big events downtown.</p> <p>They have been in contact with the city and with Ashley Energy, as well as the owner of the vacant lot. She said that all parties are aware of the issue</p>

			<p>but nobody will claim responsibility. St. Louis City says that Ashley Energy owns the steam, and Ashley Energy says the city owns the pipes, and nothing gets done. She's reached out to her Alderman as well, who gave her our number. At one point someone came out and dumped a ton of dirt into the cracks which only made the smell worse.</p> <p>I explained that we definitely wouldn't be able to regulate the sinkholes/property damage, and that steam wasn't a regulated pollutant, but I told her we could do an odor evaluation and to call us when the odor is incredibly strong. I told her we would also contact Ashley Energy and the City to learn more about the issue.</p> <p>?1/9/23 Lemma Zewdie contacted Ashley Energy and send me the following e-mail:</p> <p>"I just called Donnie Peek, Operations Manager there. He told they are aware of the issue. They have 17 miles of pipes that carry steam to the city. They check for leaks daily at the varies locations/manhoels. Steam is the product they generate for money and cannot afford to have leaking pipes in the delivery pipes. He told me that he has spoken with the owners of Al's Restaurant in the days after Christmas. (see SharePoint for full report)</p>					
SLRO	1/18/2023	1/13/2023	Precoat Metals	St. Louis City	Odor	JM		
Concern No.	52240	Concern Info	"This factory has consistently released toxic fumes from burning paint into the air of our neighborhood for years. I have previously reported violations and today the fumes are rampant to the point that my home is filled with the toxic smell and my 1 year old child is breathing it in. Previously a worker at the factory told me 'they're burning used paint, I'd report it too if I lived here.'					
Comments	?At the time of the investigation, no odors detected in neighborhood. At plant, the site was not coating. Examined required records per Operating Permit. Mr. Walker indicated that he was contacted on 1/12/23 about odor. At time, he investigated control device which is required to eliminate emissions escaping. Pictures were provided which indicated the device was operating in required manner.

			Please describe your concern, including the location on the property. My neighbor operates a hydronic wood boiler incorrectly. I have spoken with the fire department and local police but no one will even talk to this person about it. The boiler smokes out the entire valley of homes, fills my own home up with smoke, and is causing everyone in my area to have health issues. I am also concerned he is not only burning wood. At times I smell something like a chemical that burns my throat. I have documented this issue with photos and videos for years.

Concern No. 52314 Concern Info Concerned party submitted both an inquiry and a concern online: Please describe the Assistance needed I would like to get information from your department regarding proper and legal disposal of cut timber and timber waste in the state of missouri. The property owner at 1720 Koch Road 63366 is using a residential lot to stack and store 16 foot timbers and open burn tree waste. I would like to know if this is legal. Please describe your concern, including the location on the property. Property owner at 1720 Koch Road is utilizing the residential lot for open burning and storage of cut timber and tree waste. Open burning of items cleared from lots (trash) also takes place at this site. The lot is next to Peruque Creek and tributaries. During the spring floods timber was displaced from the lot on to neighboring lots and into waterways. The lot is a hazard with breeding grounds for rodent populations. St. Charles County Code enforcement has been notified to no avail.								
Comments ?I met with Mrs. Chostner?'s husband Mr. Romano at 1720 Koch Drive, which has a condiment mobile home and There was a huge amount of logs around the above property. according to Mr. Romano the burn happen in a large quantity and left untended, I did not see any trash or any other materials, there was no open burning at the time of my investigation.

Concern No.	52447	Concern Info	Two similar concerns recieved the same day (online):					
			<div>#1</div> <div>I live at 4214 Giles, St. Louis, MO 63116. I moved here a little over three years ago. Precoat Metals has a factory close by located at 4301 South Spring Avenue, St. Louis, MO 63116. On January 4th, 2023 I smelled a very strong odor something like burning electrical. I first noticed it in the very early morning hours and in the next few hours, the odor was so pervasive that I could smell it in my house. I suffered from burning eyes and coughing. I called the Fire Department because I thought there was an electrical fire somewhere close. After they checked my house they said Oh it's just the factory - they probably need to change their filter. It was the first time in three years that I smelled that odor.</div> <div>Today, January 28th, and two days ago on January 26th I smelled the odor again. I think this is a public health safety matter and a pollutant. I'd like to know if something can be done to stop the emissions. Is this where I can report it? If not, can you give me info on where I can make a complaint?</div> <div>Thank you, Linda DiMeo Lowman 314.320.6652</div> <div>#2</div> <div>Precoat is consistently releasing foul smelling fumes into the air which are distributed throughout the surrounding neighborhood and are strong enough to permeate the inside of my home.</div> <div>Joseph William Sulier 314-620-7922</div>					
Comments	?One caller indicates the odor is like "electrical burning" and the other caller can not say what the odor smells like. Precoat Metals is a business which has an Air Pollution Title V permit. There are conditions within the permit that the company is required to follow.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

Concern No. 52626 **Concern Info** George Clemons is a former employee of the Sigma Aldrich chemical plant. George indicated that the site is emitting methanol, ethanol, and acetone above regulatory limits. It was indicated that the emissions are being generated in the T-west building on the site. The emissions are possibly coming from the centrifuge #3CF0001 and from the lines that pipe the solvents into the building from the facilities tank farm on the northern portion of the site. George also indicated that there have been multiple safety issues with un-adequate training being provided.

Comments ?On 2/14/202, I called (636 375 2843) the concerned party and obtained additional information regarding the concern he has. On 2/23/2023, I visited the site and performed a full compliance evaluation inspection (CEI). I inspected sources of emission in the T-west building, where, according to George Clemons, the emissions are being generated. I inspected centrifuge #3CF0001 and the lines that pipe the solvents into the building from the facilities' tank farm on the northern portion of the site, where the emissions are possibly coming from. I did not observe leaks in the system (equipment and tank farm).

The facility has several stacks on the roofs. I drove around the facility and observed for visible emission from the stacks at all 4 sides. I did not observe any violation. Amy Gjoka and I observed the flare stack for visible emissions and agreed the opacity of the smoke from the flare was approximately 5% at the time we observed. Flare controls HAP emissions from T West and the Cherokee Tank Farm.

Records reviewed show during the time period of January 1, 2022 through June 30, 2022, at the Cherokee T-West area a work order was submitted for 3RT-0004 on 6/2/2022 and would have required a repair and follow up LDAR test (leak test) within 15 days. However, the repair and LDAR test were not completed until 8/6/2022. The 15-day mark would have been on 6/17/2022 so this was out of compliance for 50 days. On 8/6/2022, the reactor was repaired and passed a LDAR test. It is now back in compliance. In addition, from January through June 2022, there were two significant maintenance events and two malfunction events due to high K.O levels and a fire. The maintenance events were for relocating pipes and to replace an actuator. These incidents are reported to the program as required through annual and semi-annual reports. Rerecords are kept to demonstrate actual HAP emissions and did do not exceed limits.

Note: The facility actually encourages its employees to come forward with information if they see any leaks anywhere or any other environmental violations issues. The facility has established rewarding system where it pays money for individuals who identify violation anywhere in the operations. Amy Gjoka explained the rewarding program to me and encourages any one to come forward with violations and be rewarded for it. For more information see the February 23, 2023 CEI report.

Concern No. 51928	Concern Info Caller says neighbor is actively burning tires, possibly by throwing them inside an outdoor furnace. Caller said neighbor has been doing this off and on for the past year, but caller definitely smelled the tires last night. Caller did not want to give their address because she did not want the neighbor to know who filed the concern. Caller thought the neighbor would have access to that information because neighbor is a police officer. Caller gave me directions.							
Comments	SharePoint #3534 ?On December 28, 2022 I arrived on site to the area of concern located at 101 Greenleaf Drive, Seymour. Before making contact with a landowner, I performed a cursory review of the area and did not observe any indication of open burning in the immediate area. I then made my way to property of concern and came in contact with the landowner, Duane Sanders. I introduced myself, provided credentials, and explained the reason for visiting. Sanders informed me that he has been burning tires in an outdoor furnace behind his house, Sanders states that he uses the tires in order to ignite the wood he burns to heat the house. When asked how he came in possession of these tires, Sanders explained that he knows an individual from town that drops a few off here and there. I informed Sanders that he could not accept the tires as he would be acting as an unpermitted landfill and that no tires can be burned for any reason. Sanders then offered to show me where the burning has occurred. Next to the furnace where the tires had been burned was a pile of the wires left behind. Based upon the size of the pile, I estimated that approximately 15-20 tires have been burned on the property. I informed Sanders that a Letter of Warning would be issued for the burning of tires and that all illegal burning must stop. Sanders acknowledged that he would no longer burn or accept any tires. I then explained regulations on open burning and left Sanders with the fact sheets and regulations related to open burning. Ending my investigation. ?							
SWRO	1/5/2023	12/20/2022		Webster	Household Hazardous Waste Odor	WH		
Concern No. 51968	Concern Info Caller states that someone is using chemical, radiological, and microwave warfare on her as a terrorist act. Caller states that someone has dumped a chemical under her home that is causing a strong chemical smell that burns. She has contacted the mobile home park owners and they are afraid of messing with it. I advised the caller she should call the Webster County Sheriff. She stated that the County knows about it. Caller stated that Amy Murray was the person that dumped the chemical under her home and was burnt by it.							
Comments	SharePoint #3556. No chemical dumping was observed. Safety concerns regarding attacks should be directed to local Sheriff's office.

Concern No. 51969 **Concern Info** Anonymous Concern Email - is possible burning of regulated materials on Sunday 12/18/22. The color of the smoke ranged from very black to yellowish, to brown. The CP could not get a look at the burn pile, only that the colors of smoke seemed off. They sent me two pictures but said the smoke was much darker but they didn't get a photo of the black smoke. The smoke appeared to be coming from the property indicated below off the Assessor's page, owned by David Emerson and Paula Haik.

Comments SharePoint #3555

On December 28, 2022, I arrived on site to the area of concern located near the intersection of Owen Road and Strawberry Court, Nixa. I performed a cursory review of the area and did not observe any indication of open burning. From the public roadway on Owens, I was unable to gain a clear vantage point of the property. Additionally, no one was on site during the time of investigation. I then pulled over and reviewed aerial imagery and found a private drive, belonging to the City of Nixa that ran along the eastern property boundary. I contacted Doug Colvin with the City of Nixa public works division, who granted me permission to access the drive and property. From the City property, I was able to observe the property in greater detail. According to Google, aerial imagery the property was previously undeveloped and contained a stand of small trees and shrubs. Most recently, the property has been cleared of trees which were disposed of by burning. I observed two burn piles that contained only untreated wood waste that is consistent with land clearing operations. Upon returning to the office, I reviewed aerial imagery to determine the approximate distance from these burn piles to nearby residences and structures. I found that these burn piles exceed the 200 yard setback distance. I did not observe any stockpiled materials or unburned piles, indicating the burning on the property had been completed. I also did not observe any evidence of burned regulated materials. At this time no violations are being issued. ?

<p>Concern No. 52067 Concern Info Voice mail left over the weekend January 1, 2023. Forwarded via email January 3, to be written up. Odor from IsoNova. Complainant lives 2 miles slightly NW of IsoNova. No phone number or email was left on the voicemail.</p> <p>Comments SharePoint #3641</p> <p>Violation of odor regulation. The wind was out of the west-southwest at 15 mph. I arrived from the north, traveling from Mt. Vernon on 39 Highway to Farm Road 1155. I went south off of Highway 39 onto Farm Road 1155 and began using the Nasal Ranger in a closed position for about 5 minutes stopped northeast of the facility. I then continued driving south on Farm Road 1155 with the Nasal Ranger dialed on 7:1 D/T. I was driving down the east property line on Farm Road 1155. When I neared a utility pole, east of the facility, I got my first detection at 4:02 p.m. (see map). I drove south to Farm Road 2190 and headed east to Highway 39. When I reached Highway 39 I turned north and drove about a mile and pulled over to clear my nose. I waited for time to pass and for my nose to clear. I then drove back south on 39 Highway, then took Farm Road 1155 south and began using the Nasal Ranger. When I was just past the utility pole, I got a second detection very close to the first detection. Due to it being late in the day, I notified the facility by email on 1/6/23, and notified the Air Program. The facility is currently under enforcement.</p>

Concern No. 52068 **Concern Info** Voicemail left on phone January

Comments SharePoint #3642

On January 5, 2023 I arrived on site to the area of concern located at the intersection of West Bypass and W Bennett Street (also identified as Farm Road 146). The site consists of a land clearing and construction project managed by Emery Sapp and Sons (ESS) which was previously investigated by the Department on September 13, 2022 for a concern of fugitive dust. During this investigation, ESS was conducting a land clearing operation and contracted the grinding of trees cut on site to Hansen's Tree Service. In addition to the dust created by the tree grinding operation, a significant amount of dust was observed from vehicle activity. After viewing dust leaving the property to the east and finding accumulation on vehicles in neighborhoods in the direction of wind, ESS was issued a letter of warning and was returned to compliance on October 20, 2022.

During my investigation on January 5, 2023, I observed no fugitive dusts anywhere on the property. At this time, the property was saturated from rain events earlier in the week. I then made my way east of the property to the neighborhood where I observed accumulating dust and debris on vehicles. At this time I was unable to observe any accumulating dust on surfaces beyond the property of origin. No violations at this time. ?

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
Concern No.	52119	Concern Info	FROM EMAIL: Sharon Kennedy of the EPA just telephoned, she received an environmental concern call in Lamar, Missouri. The concern regards city workers on Mill Street in Lamar, Missouri who are removing asbestos roofing, in what the CP feels is a dangerous manner.					
Comments	SharePoint #3667 On January 6, 2023 I arrived on site to the area of concern located near the intersection of Mills and east 12 th street. The property of concern can be further identified as Parcel ID: 09-09.0-30-02.0-042-005.000 and is owned by the City of Lamar. On this property is a single story residential structure that is currently having Transite siding removed by city workers. At the time of investigation no workers were on site. From the public roadway on Mill Street, I was able to observe that the structure had the majority of siding removed and placed into black bags. Evidence of improper removal practices was observed along the foundation of the structure, as small pieces of Transite were found. I then made my way to Lamar City Hall and asked to speak with an employee who would oversee demolition and renovation of structures owned by the City. I came in contact with Jim Buzzard, building inspector for the City of Lamar. I introduced myself, provided credentials, and explained the reason for visiting. To establish whether or not this structure would be regulated, I needed to find out when the fiscal year runs for the city. Buzzard informed me that the cities fiscal year runs from July-June. I then asked Buzzard if the city had any other projects similar to the structure on Mills. Buzzard explained that is the only demolition project the city has planned for this year. Since this is a single residential structure and will be the only structure demolished this fiscal year, the structure and project was deemed unregulated. I asked Buzzard for permission to view the property in greater detail and was granted access to enter the property. Upon further inspection I observed 6 pallets with approximately 4-6 double bagged waste bags containing the removed Transite siding. I then carefully opened one of the bags to determine if the bag had moisture and the condition of the Transite itself. I was unable to observe any moisture in the bag and confirmed the siding had been removed improperly. Buzzard confirmed the Transite had been removed manually, dropped from height, and was not wet during removal. I explained to Buzzard the material must be disposed of as RACM at licensed landfill that would accept the materials. Buzzard informed me they would be taken to the Prairie View Landfill for disposal and will retain the waste manifest. I then recommended that the remained of the Transite Siding be removed in a way that limits the amount of breakage, to wet the material prior to removal, and continue to double bag. Buzzard and I then brief went over what makes a structure or project regulated and also inspection and notification requirements. I thanked Buzzard for his time and ended my investigation. No violations.? No violations.

Concern No. 52135 **Concern Info** Caller said there is a rotten egg and mold odor in the air at 3:30 PM today when she stepped outside, from Isonova

Comments SharePoint #3708

I arrived on site to the area of concern located near the Isonova Plant off the intersection of State Highway P and Farm Road 2190 at 7:30 a.m. Weather conditions at this time were cloudy with winds from the NNW at 12MPH, a temperature of 26 degrees, and a relative humidity of 87%. The nasal ranger was also prepped at this time. Due to the wind direction, I focused my efforts on FR 2190, approximately one mile south of the Isonova. While traveling south on State Highway P past Isonova, I observed a tanker truck backed up to the lagoon that appeared to be filling with waste water.?

After arriving to FR 2190, I then travelled east towards FR 1155 and did not observe any odors in concentrations that would violate Missouri odor regulations. I then travelled North on FR 1155 and also did not observe any odors exceeding the 7:1 dilution threshold. As the winds have yet to shift, I continued to conduct odor surveillance along FR 2190, and FR 1155 for approximately 30 minutes. I then traveled west on FR 2190, then north onto FR 1135, and then east onto FR 2170, during this time I did not observe any odors in excess of the 7:1 dilution threshold. I ended my investigation at approximately 8:30 with no violations.

Concern No. 52268 Concern Info Caller said that sawdust from a commercial wood pellet manufacturer is allowing sawdust to blow offsite and is causing health concerns.								
Comments SharePoint #3791-During the site visit the business was not processing wood into pellets. A few inches of snow was on the ground, I did not witness evidence of off-site sawdust on the snow on adjacent properties. Some housekeeping issues were noted regarding sawdust on the outside near and around the cyclone dust collectors whereas a significant layer of sawdust was around the base of the cyclones. In addition the building exterior showed dust at a exhaust fan on the west side of the building. Dust was caked on the building wall around the loading dock/door. A stockpile of sawdust was outside near the cyclones. At the time of the visit I did not see evidence of off-site migration of particulates/dust. ?I spoke with the owner Mr. Hufft by phone on 1/26/2023. Hufft said they expect to update the facility in a few weeks by adding an additional cyclone dust collector and installing an auger to move the material captured by the cyclones to an inside storage area. The facility was found to be in compliance

Concern No. 52265 **Concern Info** Isonova is smelling

Comments SharePoint #3826

On January 24, 2023 the Department received environmental concern #3826 in regard to foul odors coming from Isonova Technologies (109-0043). On January 27, 2023, I (Treavor Bussard) arrived to the area of concern near the intersection of State Highway P and State Highway 39 at 8:52 a.m. Weather conditions at the time of investigation were partly cloudy skies, winds from the SW at 23 MPH, a temperature of 36o F, and a relative humidity of 66%. At this time, I also prepped the use of the nasal ranger and set off toward my first target area along Farm Road 1155. Shortly after the start of odor surveillance, I detected odors in excess of the 7:1 dilution threshold at 9:05 a.m. I then left the area and waited fifteen minutes to clear my nose of any odors. I made sure that all vents and windows were closed so that no other potential odors could fill the cabin of my vehicle. I then returned to Farm Road 1155 where I again detected odors in excess of the 7:1 dilution threshold at 9:23 a.m.

After documenting a violation of the odor regulations, I then performed a cursory review of the area and did not observe any other potential sources of odors. While passing by the facility on State Highway P, a large tanker truck from Hillhouse Service was observed leaving from the lagoon area. I then pulled into the facility at 9:53 a.m. and requested to speak with Dan Bowers. I informed Bowers of the findings today and asked if we could view the lagoon area. I asked Bowers how often Hillhouse pumps out of the lagoon, Bowers responded daily. When asked how the waste is disposed of, Bowers stated that it is normally land applied but since it has been so wet that recent loads have been going to the Springfield Waste Water Treatment Plant. In a response letter sent from Isonova in regard to the enforcement case, Isonova mentioned they had installed a device that utilizes essential oils to help mask the foul odor coming from the lagoon. In this same response letter the facility stated they were not in operation due to difficulties with the wiring. Since that letter, Bowers stated this unit was put into operation in August 2022. At the time of inspection this device was functioning, however I do not believe this is an effective control measure to mitigate odors from the facility. ?

Violation 10 CSR 10-6.165. Facility is already in enforcement. Enforcement staff have been notified.

Concern No. 52471 **Concern Info** Large pile of trees burning near Pinergar arena on the botanical gardens properties.

Comments See Sharepoint #4063

?On February 3, 2023, I (Treavor Bussard) was returning to the Southwest Regional Office travelling South on Kansas Expressway at approximately 11:15 am. I observed a large plume of smoke emerging from a property north of Darr Agricultural Center. From the roadway leading towards Pinegar Arena, in an adjacent field, I overserved large amounts of untreated wood wastes being burned, several workers were close by. Before making contact with those on site, I searched Greene County Assessor Data and determined the land to be owned by the City of Springfield. I then made my way to the Springfield-Greene County Botanical Center and followed the park road until the parking lot near the Mizumoto Japanese Garden. Here, I came in contact with Austin Evans and Sonny Decker, Environmental Specialist, Springfield Environmental Service. When I examined the burn area, I found two separate burn piles. I visually determined the material currently being burned to exceed 80 cubic yards. The pile closest to the maintenance road had a few pieces of Styrofoam and plastic planters from flowers. The second pile, and largest of the two, appeared to be all wood waste, a section of this fire had a portable air curtain device. However, it had little effect as the device could not service the entire fire, which subsequently cause excessive opacity from the smoke. On the west end of the pile I observed the springs from a single mattress and an unidentifiable object with a fabric like covering. Seckler, Evans, Decker, and I then regrouped to discuss our findings. I informed the group of the violations identified and spoke briefly on the open burning regulations. Due to the current size of the piles, I made sure to mention that fires from collection operations can only occur between sunrise and sunset and must be supervised at all times. I recommended that future vegetative wastes be mulched and used elsewhere or if there are no other options, burn piles should only be as large as what can be burned within the allowed times. Evans then made the decision that the fires should be put out. Seckler relayed this information and stated the crew would spread the fire out, apply water with a nearby truck, and then spread dirt across the area. I thanked the three for their participation and ended my investigation. Later that afternoon, prior to the end of my shift, I took a quick drive from the office to determine if the fire had been extinguished. At 5:00 pm I returned to the road travelling west toward Pinegar Arena where I again observed large amounts of smoke emerging from these piles. It would soon be sunset and no workers were observed supervising the fires at this time. ?

<p>Concern No. 52368 Concern Info Neighbors have been burning materials for approximately two years at this location. Caller states that the Clever Fire Department has been out several times. Caller said that a fire was going last night at 7:30 pm. with thick black smoke.</p> <p>Caller alleges that there is burning of trash, rubber, copper wire insulation, batteries, and air conditioners. Caller says there is burning going on all hours and sometimes every day. Caller says there is a trailer full of stuff that the people will burn. Caller says there are several vehicles that bring in trailers with items that are then burned.</p> <p>Caller is also concerned about debris and fluids washing through the neighborhood. Caller said that the fire chief may have more information.</p> <p>Comments SharePoint #3908 On February 9, 2023, I arrived on site to the area of concern located near 234 Pin Oak Drive, Billings at approximately 10:20 a.m. Weather conditions at the time of investigation were partly cloudy skies with winds from the NW at 17 MPH, 47 degrees, and a relative humidity of 67%. Prior to making contact with a landowner, I performed a cursory review of the area and did not find any indication of open burning. Visual inspection of the property yielded a truck and trailer loaded with construction debris and a nearby burn pile consisting of construction wastes. I then made contact with the landowner, Jeremy Frangella, I introduced myself, provided credentials, and explained the reason for visiting. Frangella offered to show me the burn area. Upon closer inspection I was able to confirm that the construction waste from the trailer had been burned on site. I asked Frangella when the last time he had burned and was told the day before yesterday (02/07/23). I asked Frangella where the materials had come from and he stated he works odd jobs and that it was from a recent renovation project. I informed Frangella that this material could not be disposed of by open burning and must be taken to a landfill or transfer station. We then spoke about Missouri Solid Waste and Air Conservation regulations and I ended my investigation. ??Violations 10 CSR 10-6.045 and RSMo 260.210</p>
